SUMMARY

Software engineer in securities lending technology at Goldman Sachs: a Python validator for technology-risk remediations across a dozen production Java and Spring Boot applications, and Kafka Streams services on Kubernetes. B.Tech CS and Applied Mathematics, IIIT-Delhi; published at ACM TEI '24.

EXPERIENCE

Software Analyst

Jul 2025 – Present

Goldman Sachs, Global Banking & Markets

Bengaluru, India

- Built a Python validator that verifies technology-risk remediations across a dozen production Java and Spring Boot applications: it confirms that each update was made correctly and validates it end-to-end in QA with minimal human intervention.
- Cut the QA validation cycle for a remediation from roughly one week to a couple of hours by replacing manual regression passes with automated test execution and result triage.
- Develop Kafka Streams applications that manage securities-lending data internally: change stream-processing logic and write producers, consumers and supporting tools. In production support, trace messages across topics, monitor consumer lag, replay data by resetting offsets, and repair bad or missing records.
- Write the Dockerfiles Kubernetes builds these services' pods from, and diagnose issues with kubectl (pod logs, configuration, exec, restarts) and through failing GitLab CI pipelines.

Summer Analyst

May 2024 – Jul 2024

Goldman Sachs, Global Banking & Markets

Bengaluru, India

- Built a message search-and-replay monitor for securities lending systems, reducing issue turnaround from over an hour to under five minutes and converting a manual investigation into a self-service tool.

SKILLS

Languages: Java, Python, C/C++, SQL, Swift, JavaScript

CS Fundamentals: Data structures and algorithms

Backend & Data: Spring Boot, REST APIs, Apache Kafka (Kafka Streams), IBM Db2, Sybase

Infrastructure: Docker, Kubernetes, GitLab CI, Maven, Git, Linux, automated testing

ML & Robotics: PyTorch, Hugging Face Transformers, ROS 2, Nav2, SLAM

EDUCATION

B.Tech, Computer Science and Applied Mathematics

Jan 2022 – 2025

Indraprastha Institute of Information Technology Delhi (IIIT-Delhi)

CGPA: 8.43/10

PUBLICATION

S. Shashwat*, A. Padmagirwar*, **S. Arora***, A. Srivastava. “KaavadBits: Exploring Tangible Interactive Storytelling of Branching Narratives through a Kaavad-inspired Installation.” ACM TEI '24, Cork, Ireland, Feb 2024 (**equal contribution*). doi.org/10.1145/3623509.3635251

PROJECTS

Bish, a Linux Shell in C — C, Linux

2022

Interactive Linux shell built on forks and threads. Also wrote a Huffman file compressor in C with the min-heap, tree, bit packing and bit reader written from scratch. github.com/arorashivoy/Bish

Linking Mathematical Symbols (SemEval-2022 Task 12) — PyTorch, Hugging Face Transformers

2024

Two-stage system, built with a teammate, linking symbols in scientific papers to the text that defines them: SciDeBERTa span tagging (0.84 macro-F1) feeding LUKE entity-pair relation classification (0.71 test accuracy).

github.com/arorashivoy/LinkingMathsSymbols

ROS 2 Autonomous Navigation — ROS 2, Nav2, Gazebo, Python

2026

Differential-drive robot with LiDAR mapping and autonomous navigation: wall-following control, SLAM mapping and Nav2 path planning, plus a synthetic LaserScan publisher to work around headless GPU limits on Apple Silicon.

StrikeOut, iOS task manager — SwiftUI, AVFoundation

2022

Shipped to the App Store with 400+ downloads; custom notification audio, user-defined themes, quantity-tracked list items.

github.com/arorashivoy/StrikeOut

AWARDS

Track Winner, RedBrickHacks · 2nd Runner-up, DecodeEV Hackathon · 1st Runner-up, Green India Hackathon
